## DISCUSSION:

Mr. Beisser told me that commercial fisheries on the Coosa and Oostanaula Rivers have been closed since 1976 due to PCB contamination. PCB contamination is known to exist from Rome to at least the Georgia/Alabama border. He had none of the test data. He said that EPD's water quality branch has such information.

He also said that there is much recreational fishing done on both rivers. I asked if there was fishing on Burwell Creek and he said that there is recreational fishing on most all small creeks in the area. (He wasn't familiar with Burwell Creek, but would assume fishing occurs on it.)
